

## UI/UX Design - UI/UX development / Graphic Designer

Hi my name is Daniele Fumanti, and I'm a freelance UI/UX designer. My work is also my passion, I've been designing interfaces, websites and applications since young age. I love solving complex UI and UX problems designing components that are easy for the end user and also feasible for the engineers that work in my team.

I attended the NID (Nuovo Istituto Design) in Perugia where I obtained my qualification in graphic design. During my studies I attended the course of web design we have dealt with the whole phase of designing and creating Apps and web sites. The work starts from the study of the usability to the definition of the wireframe, the UI study and finally the realization.

Illustration is my passion, I love the idea of creating custom icons, images and graphics that make the design of the products I create precious and unique.

I have also worked on:

- Motion design
- Photography
- Cinema 4D
- Illustration
- Graphic Design
- 3D Motion design

### EXPERIENCE

During my collaborations I have been involved many times in the early stage study and implementation of interfaces for applications and websites by talking with customers and users to better understand the requirements and the use cases. In most of these interfaces I like to insert custom illustrations or icons to make the UI more impactful and custom.

In addition to taking care of the "aesthetic" part on many occasions I also had to write the code for the actual implementation of the project at 360° by using HTML and CSS.

In other circumstances, I had to deal with creating posters and flyers for some events or to sponsor companies and brands.

The curious thing is that I also had to combine these two aspects of design in some circumstances creating flyers that sponsored some apps and by inserting a QR Code inside it was possible to merge the paper or digital.

### MAIN SKILLS

The following are my main skills:

- Deep knowledge of Adobe Creative Suite.
- Implementation of web applications using jQuery mobile.
- Implementation of web interfaces using Bootstrap UI framework.
- Handoff designs and styleguides with Zeplin.
- Agile and scrum methodologies- Wordpress.
- Good knowledge of HTML5 and CSS3.
- Conscience and use of Atom.
- Conscience and use of Sketch.
- Ability to create prototypes using Invision.
